## QRPme's Tuna Helper Kit

Pull the tab, open the can and survey the parts..

I have a s pecial tuna can rigged for folding the parts of my current kit under construction.

Tuna $\mathcal{H e}$ lper List of $\operatorname{Materials:~}$
Diodes: $\quad \mathcal{D} 1, \mathcal{D} 2$ ef $\mathcal{D} 3=1 n 4148$
Rexistors: R1=51ofms (green-brown-black)
$R_{2}=1$ Kofms (6rown-6lack-red)
R3 $=47$ Kofims (yellow-violet-orange)
$\mathcal{R} 4=100$ ofms (6rown-6(ack-6rown)
Capacitors:C1 = . 01 uf (103)

$$
\begin{aligned}
& \mathcal{C} 2, \mathcal{C} 4=.1 u f(104) \\
& \mathcal{C} 3, \mathcal{C} 5=2.2 u f
\end{aligned}
$$

Transistor: $Q 1=2 \mathcal{N} 2222 \mathcal{A}$

Connectors: $\mathcal{A N} \mathcal{N}, \mathcal{R X}, \mathcal{T} X, \mathcal{M U I E}=R C A$
$+12 v=$ RCA OR2 pos.screw terminal
$\mathcal{P} 1=3$ pin $\left(3 \chi 1 \chi .1^{\prime \prime}\right)$ Molex single rowheader with jumper $\mathcal{S} \mathcal{F}=4$ pin $(2 \times 2 x .1$ ) $\operatorname{Mole} x$ dual row header with jumper
Misc: $\quad 6 \times 32$ nut $66-32 x 1.5^{\prime \prime}$ bolt, circuit board, can flabel

OKlet's get to the building part..........

Install the low parts:
Diodes:
$\mathcal{D} 1, \mathcal{D} 2, \mathcal{D} 3: 1 \mathcal{N} 4148$ or
$1 \mathfrak{N} 814 \mathcal{A}$
Resistors:
R1: 51 ofms (GRN $\mathcal{B R} \mathcal{N} \mathcal{B L K})$
R2: $1 \mathcal{K}$ ofms ( $\mathcal{B R N} \mathcal{B L K} \mathcal{R E D}$ )
R3: 47K ofms ( $\mathcal{Y} E \mathcal{L} \mathcal{V I O} O R G$ )
R4: 100 ofms ( $\mathcal{B R \mathcal { N }} \mathcal{B L K} \mathcal{B R} \mathcal{N})$

Youcan batch solder parts for quicker assembly. I insert 3 or 4 parts, spreading the le ads apart to Keep them in place whenthe board is flipped over. I place the board on the can for stability. Solder and clip off the excess leads..

$\mathcal{N}$ ow add the capacitors.
C1: . $01 u f(103)$
C2,C4: .1uf (104)
C3,C4: 2.2uf
and the transistor.
Q1: $2 \mathcal{L} 2222 \mathcal{A}$

Tall stuff like the relay and connectors are next.

P1: 3 pin $\chi .1 "$ spacing fe ader S F: $2 \times 2 \times .1^{\prime \prime}$ spacing fie ader

Re lay: Axicom $\mathcal{D P D} \mathcal{T}$
$\mathcal{N}$ ow add the bulky connectors. I use all RCAs in my tuna station; 6 ut supply a 2 pin screw terminal connector for the power connector if you want to run wires...

The board is now finished and is mounted on the can and secured with the bolt Gnut.

Your Tuna $\mathcal{H}$ lper is now ready to automatic ally switc fy your antenna betwe en the transmitter and receiver! I use $\mathcal{R G B}$ component video cables to fook it up in my station.
$\mathcal{E N}$ I OY!
